LARGE SPECIMEN TREES

NURSERY GROWN -- TRANSPLANTED

These trees are all grown far apart in nursery rows, having been frequently transplanted to insure a good root system and render them especially suited for future moving. The caliper measurement is taken at a point twelve inches above the ground and indicated as diameter (Dia.).

The saving of time in planting such trees is so marked that scarcely any home owner can afford to plant the usual small tree - which would require ten to twenty years to equal these in size.

The prices quoted below are for the trees dug with a large ball of earth, but not planted. Planting charge varies from 50% to 75% additional, depending upon conditions at point of planting, accessibility, distance, etc. Minimum planting charge on large tree orders \$15.00.
